MongoDB – Complex Queries

Mongo DB Exercises - With the Restaurants Data Set

- 1. Download the restaurants.zip file
- 2. Unzip the file, you will see restaurants.json file
- 3. Run the mongod server
- 4. Run the following command to import the json file provided. It will load the json file into the mongodb with database name restaurants, collections name addresses mongoimport --db restaurants --collection addresses -- file restaurants.json
- 5. Run mongo shell command
- 6. show databases
- 7. use restaurants
- 8. db.addresses.find() should print entire json data
- 9. Then start working on the following exercises and submit your queries as the answers to the questions

Query Reference Links and Cheat sheets

Exercise Questions

1. Write a MongoDB query to display all the documents in the collection restaurants.

```
db.addresses.find().pretty()
```

2. Write a MongoDB query to display the fields restaurant_id, name, borough and cuisine for all the documents in the collection restaurant.

```
db.addresses.find({}, {'restaurant_id': 1, 'name': 1, 'borough': 1, 'cuisine':1}).pretty()
```

3. Write a MongoDB query to display the fields restaurant_id, name, borough and cuisine, but exclude the field _id for all the documents in the collection restaurant.

```
db.addresses.find({},{"restaurant_id" : 1,"name":1,"borough":1,"cuisine"
:1,"_id":0}).pretty()
```

4. Write a MongoDB query to display the fields restaurant_id, name, borough and zip code, but exclude the field _id for all the documents in the collection restaurant.

```
db.addresses.find({},{"restaurant_id" :1,"name":1,"borough":1,"address.zipcode" :1,"_id":0}).pretty()
```

5. Write a MongoDB query to display the first 5 restaurant which is in the borough Bronx.

```
db.addresses.find({"borough": "Bronx"}).limit(5)
```

6. Write a MongoDB query to display all the restaurant which is in the borough Bronx.

```
db.addresses.find({"borough": "Bronx"}).pretty()
```

7. Write a MongoDB query to display the next 5 restaurants after skipping first 5 which are in the borough Bronx.

```
db.addresses.find({"borough": "Bronx"}).skip(5).limit(5)
```

8. Write a MongoDB query to find the restaurants who achieved a score more than 90.

```
db.addresses.find({grades : { $elemMatch:{"score":{$qt : 90}}}})
```

9. Write a MongoDB query to find the restaurants that achieved a score, more than 80 but less than 100.

```
db.addresses.find({grades: { $elemMatch:{"score":{$gt:80,$lt:100}}}})
```

10. Write a MongoDB query to find the restaurants which locate in latitude value less than -95.754168.

```
db.addresesses.find({"address.coord": {$lt:-95.754168}})
```

11. Write a MongoDB query to find the restaurants that do not prepare any cuisine of 'American' and their grade score more than 70 and latitude less than -65.754168.

)

12. Write a MongoDB query to find the restaurants which do not prepare any cuisine of 'American' and achieved a score more than 70 and located in the longitude less than -65.754168.

13. Write a MongoDB query to find the restaurants which do not prepare any cuisine of 'American' and achieved a grade point 'A' not belongs to the borough Brooklyn. The document must be displayed according to the cuisine in descending order.

14. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which contain 'Wil' as first three letters for its name.

```
db.addresses.find(
{name: /^Wil/},
{
  "restaurant_id": 1,
  "name":1,"borough":1,
  "cuisine":1
}
)
```

15. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which contain 'ces' as last three letters for its name.

```
db.addresses.find(
{name: /ces$/},
{
"restaurant_id" : 1,
"name":1,"borough":1,
"cuisine" :1
```

```
}
```

16. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which contain 'Reg' as three letters somewhere in its name.

```
db.addresses.find(
{"name": /.*Reg.*/},
{
   "restaurant_id": 1,
   "name":1,"borough":1,
   "cuisine":1
}
)
```

17. Write a MongoDB query to find the restaurants which belong to the borough Bronx and prepared either American or Chinese dish.

```
db.addresses.find(
{
"borough": "Bronx",
$or:[
{ "cuisine" : "American " },
{ "cuisine" : "Chinese" }
]
}
)
```

18. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which belong to the borough Staten Island or Queens or Bronx or Brooklyn.

```
db.addresses.find(
{"borough" :{$nin :["Staten Island","Queens","Bronx","Brooklyn"]}},
{
"restaurant_id" : 1,
"name":1,"borough":1,
"cuisine" :1
}
)
```

19. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which are not belonging to the borough Staten Island or Queens or Bronx or Brooklyn.

```
db.addresses.find(
{"borough" :{$nin :["Staten Island","Queens","Bronx","Brooklyn"]}},
{
"restaurant_id" : 1,
"name":1,"borough":1,
"cuisine" :1
}
)
```

20. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which achieved a score which is not more than 10.

```
}
},
{
"restaurant_id":1,
"name":1,"borough":1,
"cuisine":1
}
)
```

21. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which prepared dish except 'American' and 'Chinees' or restaurant's name begins with letter 'Wil'.

```
db.addresses.find(
{$or: [
    {name: /^Wil/},
    {"$and": [
        {"cuisine" : {$ne :"American "}},
        {"cuisine" : {$ne :"Chinees"}}

]}

]}

,{"restaurant_id" : 1,"name":1,"borough":1,"cuisine" :1}
)
```

22. Write a MongoDB query to find the restaurant Id, name, and grades for those restaurants which achieved a grade of "A" and scored 11 on an ISODate "2014-08-11T00:00:00Z" among many of survey dates..

23. Write a MongoDB query to find the restaurant Id, name and grades for those restaurants where the 2nd element of grades array contains a grade of "A" and score 9 on an ISODate "2014-08-11T00:00:00Z"

24. Write a MongoDB query to find the restaurant Id, name, address and geographical location for those restaurants where 2nd element of coord array contains a value which is more than 42 and upto 52..

```
},
{"restaurant_id": 1,"name":1,"address":1,"coord":1}
```

25. Write a MongoDB query to arrange the name of the restaurants in ascending order along with all the columns.

```
db.addresses.find().sort({"name":1})
```

26. Write a MongoDB query to arrange the name of the restaurants in descending along with all the columns.

```
db.addresses.find().sort(
{"name":-1}
)
```

27. Write a MongoDB query to arranged the name of the cuisine in ascending order and for that same cuisine borough should be in descending order.

28. Write a MongoDB query to know whether all the addresses contains the street or not.

29. Write a MongoDB query which will select all documents in the restaurants collection where the coord field value is Double.

30. Write a MongoDB query which will select the restaurant Id, name and grades for those restaurants which returns 0 as a remainder after dividing the score by 7.

31. Write a MongoDB query to find the restaurant name, borough, longitude and attitude and cuisine for those restaurants which contains 'mon' as three letters somewhere in its name.

```
"address.coord":1,

"cuisine":1
}
```

32. Write a MongoDB query to find the restaurant name, borough, longitude and latitude and cuisine for those restaurants which contain 'Mad' as first three letters of its name.

Happy Coding!!!
